    Education and Training  
  </a>  
  <a href="#Languages" accesskey="c">Contact</a>  
</p>
```

The above commands had been used by me to connect the buttons to the different headings in my page, this later on the coding process became my alternative for the search bar which further helped in adding a certain simplicity to my website design. This code was chanced upon in MDN.

```
<div class="floating-box">
```

```
.floating-box {  
  background-color: white;  
  padding: 20px;  
  border-radius: 12px;  
  box-shadow: 0 4px 12px rgba(0, 0, 0, 0.1);  
  max-width: 900px;  
  margin: 30px auto;  
  font-family: "Segoe UI", sans-serif;  
  line-height: 1.6;  
}  
  
.floating-box:hover {  
  box-shadow: 0 6px 18px rgba(0, 0, 0, 0.15);  
  transform: translateY(-2px);  
  transition: all 0.3s ease;  
}
```

The above code was used by me to mainly add more of a visual appeal rather helping the functionality of the website, this code was sourced from MDN and past experience.

```
#date1 {  
  font-size: 15px;  
  font-style: italic;  
  color: #777;  
  font-weight: 500;  
  text-shadow: 1px 1px 2px rgba(0, 0, 0, 0.1);  
}
```

I used this css design to add somewhat of a cloudy and less visible text to add layers of text importance in my website.

Summary

I mainly used concepts taught in the class which if I might say helped me out in numerous ways. The website development mid term project was a truly enriching one for which I would like to thank the course team.
